

## EquiForce Matrix HA

Unique duo-effect:  
 protects & improves

Healthy and supple joints are essential for the horse's performance and well-being. Modern equestrian sports place great demands on the horse hence making joint protection an important part of managing the sport horse.

EquiForce Matrix HA is one of the most concentrated products on the market, composed of glucosamine, MSM, chondroitin, boswellin, and HA.

It has a unique dual-acting formula that protects the horse's joints from the negative effects of training, competition, and racing. Additionally, it improves the joint function and mobility when this is reduced by age or injuries. The product is also very applicable for horses with prescribed stable rest and a shortage of motion.

### DAILY DOSE:

*Horses: 30 g (2 scoops)*

*Ponies: 15-20 g (1-1½ scoop)*
