

EquiForce Oil

Special oil rich in omega-3-6-9 fatty acids, lecithin, and natural vitamin E

Feed supplement rich in energy and essential omega-3 fatty acids. Very suitable for horses in hard work, horses with poor overall condition, skin, coat, and immune system, horses prone to digestive problems, as well as horses with poor appetite. EquiForce Oil is also ideal if you just want to reduce the total amount of starch in the diet or increase the total energy in the diet without feeding extra starch. 3 dl. EquiForce Oil corresponds to 1 kg of oats.

Improves performance

By replacing some of the very starchy feed (grains) with EquiForce Oil, the horse's muscles can be "trained" to increase their aerobic combustion (with oxygen) during exercise. This decreases the anaerobic combustion (without oxygen) accordingly, thereby reducing the formation of lactic acid in the muscles during exercise. The horse is thereby able to work for a prolonged period without showing fatigue and the muscles will recuperate faster and better resulting in less stiffness and tension. EquiForce Oil is added natural vitamin E, a powerful antioxidant, to prevent rancidity of the delicate omega-3 fatty acids in the product but also to supply the horse with the extra vitamin E that he needs when being on an oil rich diet. The product also contains lecithin, a phospholipid that forms a very important building block in the horse's cells.

Supports the digestive function

When feeding large quantities of starch (grains) the acid level in the horse's digestive tract increases. This can cause gastric ulcers and drop of the pH-value in the large intestine, which again reduces fiber digestion and thus the horse's generation of water-soluble vitamins (B, C, and biotin). By replacing a part of the grains with oil the same amount of energy can be fed to the horse but with less starch. Oil also acts as lubrication to the whole gastro-intestinal tract, making the horse less prone to constipation and colic.

Strengthens the immune system, skin, coat, and hooves

EquiForce Oil is composed of 3 different cold pressed vegetable oils to provide a favorable ratio of the important essential fatty acids (omega-3, 6, and 9). Horses (and other vertebrates) cannot produce these fatty acids themselves and hence need them in their diet.

Essential fatty acids (particularly omega-3) strengthens the horse's immune system and vitality, provides a shiny coat, prevents dry and brittle hooves, and soothes skin problems, such as dry skin, irritation, (tail) itching, etc. As an additional benefit the oil is very light-flowing and therefore can be poured and pumped without problems.

Ingredients:

Cold pressed oils from rapeseed, linseed, and corn, lecithin, natural vitamin E (antioxidant).

Specification:

| | |
|-------------------|-------------|
| Energy | 31,5 MJ/kg |
| Crude fat | min. 98 % |
| Crude ash | 1,5 % |
| Natural vitamin E | 2.200 IE/kg |

Daily dose:

Horses: 2-3 dl. Ponies: 1-2 dl. Should be introduced gradually over 1-2 weeks. Adjust the dose according to exercise levels and body-, coat-, and skin condition.

Please note:

Contains no artificial colors, flavours, nor preservation. Free of substances prohibited by the FEI and The British Jockey Club.

Storage:

Not too hot and in tightly closed containers. Protect from sunlight.

Package:

5 liter can (17-25 daily doses for horses)
10 liter can (35-50 daily doses for horses)
