SU-PER[®] Appetite

Supports a Healthy Appetite!

Supports a normal healthy appetite without the use of stimulants.

Most horses are generally good eaters, so long as their feed and forage is of good quality. But from time to time, you may see a decrease in appetite, or a horse that was a good eater suddenly becomes very picky.

There are a wide variety of reasons for a horse having a poor appetite. Changes in environment, stress from traveling, anxiety about other animals or new places, sudden changes in feed, or intense training can all result in appetite issues. Even basic personality traits or personal feed preferences can have an effect on appetite. While some causes may be a sign of illness or other health concern, most of the time minor issues with appetite can be quickly remedied by giving your horse an appetite supplement!

SU-PER[®] Appetite helps to support a normal healthy appetite. It contains Vitamin B-1 in conjunction with other B-Complex vitamins, N-Propyl Alcohol, and Acetic Acid, in a cherry-flavored liquid. It is added directly to the feed to help support healthy appetite without the use of stimulants.

Vitamin B-1 can help increase appetite, especially if the horse is deficient in this vitamin. Deficiencies can be a result of poor quality forages, increased needs of the performance horse, or those with poor digestive health.

In addition to Thiamine, other B-Complex vitamins such as Vitamin B-12 can help increase appetite. Also, it is often necessary for other B-Complex vitamins to be present in sufficient amounts for the body to properly utilize these appetite boosting nutrients.

SU-PER[®] Appetite has a very small amount of alcohol included. It is certainly not enough to have a detrimental effect in the horse, and works to send signals in the brain of slightly increased hunger. For horses with poor appetite, this often is enough to overcome pickiness or stress-related issues.

If you try *SU-PER[®] Appetite* and your horse's appetite does not return to normal, you may be dealing with underlying health issues, such as gastric ulcers, dental or gum issues, abrasions in the esophagus, or sore throat from rough, stalky forages.

Please feel free to contact us anytime with questions or concerns regarding your horse's appetite, or other symptoms you notice that might be tied to other health concerns.
