SU-PER[®] Biotin

Helps Support Healthy Hoof Growth!

Provides support for cracked hooves and hoof walls.

If you are looking for an economical way to provide hoof support to your horse, and are already feeding a diet that is complete and well-balanced, **SU-PER[®] Biotin** is a great choice.

Biotin is a nutrient that has been found to be a limiting factor in providing maintenance and support for new, healthy hoof growth. This means that if you do not provide adequate Biotin to the horse's diet, new hoof growth will not be as healthy as it should be, and repair of damaged hooves will be poor.

There are several nutrients involved in hoof growth, and most can be found in a healthy diet. With more and more horse owners giving vitamin/mineral supplements and feed concentrates to help balance the diet, many of these hoof growth nutrients are already present in sufficient amounts. However, the one nutrient that seems to be lacking in terms of providing hoof support is Biotin.

Biotin is a B-complex vitamin that is present in many feedstuffs, such as alfalfa, oats, and rice bran. Unfortunately, the utilization of Biotin from the diet, and the amount of Biotin produced in the hindgut via fermentation, is often very poor. Supplementing additional Biotin seems to be the most efficient way to make sure the horse is receiving sufficient amounts for hoof growth needs.

Biotin itself does not speed the rate of hoof growth, but it does make the new hoof growth more healthy, stronger, and more resilient. When working to replace damaged hooves with new growth, or correcting generally poor hoof growth, providing sufficient Biotin is critical.

We recommend 25 mg of Biotin daily for horses with damaged hooves or a history of poor hoof health. **SU-PER[®] Biotin** provides this amount of biotin per 1 ounce serving.
