

SU-PER[®] Bone Boost

Helps Maintain Strong Bones!

Helps maintain healthy bone structure and function.

SU-PER[®] Bone Boost is a balanced Calcium, Phosphorus, Magnesium, and trace mineral supplement designed for performance horses, broodmares and growing horses.

SU-PER[®] Bone Boost has been formulated as an aid to the proper growth and development of bone. It is highly recommended for young horses and pregnant or lactating mares. Proper nutrition during these critical stages of life will give the young horse it's best opportunity for developing a strong and healthy skeletal system.

Calcium and Phosphorus are both necessary for bone development and proper maintenance. Calcium is what makes up the majority of bone tissue, whereas Phosphorus binds with Calcium to increase bone strength, as well as to assist in processes that allow for the proper mineralization of bone tissue, essentially allowing the body to use Calcium where necessary.

Magnesium also plays a critical role in bone health - Magnesium is required for new bone development and repair. In addition, Magnesium deficiencies can affect Calcium absorption and utilization. For optimal bone health, it's important to have all three of these minerals in sufficient quantities. *SU-PER[®] Bone Boost* provides these minerals in their proper recommended ratio as well, to ensure the correct balance.

SU-PER[®] Bone Boost contains many support nutrients as well, including Copper, Zinc, and Boron, which all play an important role in proper bone development. We also have included L-Lysine, Vitamin D, and Vitamin A, which assist in the absorption of Calcium and other nutrients.

SU-PER[®] Bone Boost can be fed to horses of any age to provide additional minerals or help support proper bone health, and can be added to any feeding regimen.
