SU-PER[®] Hyaluronic

Supports Healthy Joint Function!

Helps to maintain synovial fluid which lubricates the joints.

SU-PER[®] Hyaluronic is a supplement providing Hyaluronic Acid to support normal joint function in horses.

Hyaluronic Acid is an essential component of all connective tissues and synovial fluid found in the joints. When horses have joint damage or suffer from degenerative conditions, the amount of Hyaluronic Acid in the joints decreases. It also causes the joint fluid to become thinner and less effective. This lack of proper lubrication and cushion can lead to friction in the joints, causing cartilage to wear on itself and result in further damage.

Feeding Hyaluronic Acid can help to increase synovial fluid levels in the joints, and help provide a “cushion” to ease joint movement and lessen wear and tear from normal movement and exercise. However, results are highly dependent on the molecular weight of the hyaluronic acid that is fed.

Up until the last 15 years or so, Hyaluronic Acid was only available in an injectable form, as oral Hyaluronic Acid products simply were not effective. Hyaluronic Acid with a high molecular weight creates a nice thick synovial fluid, but the molecules are far too large for the horse to digest properly. Low molecular weight Hyaluronic Acid on the other hand is easily digested by the horse, but the synovial fluid produced is thin and not as effective as it should be. Luckily, we have found the perfect molecular weight with our proprietary Hyaluronic Acid – it is both absorbed well by the horses and provides excellent results.

SU-PER[®] Hyaluronic can be used alone to boost synovial fluid levels, or in conjunction with intravenous Hyaluronic Acid injections, to prolong the desired results. Hyaluronic Acid also helps to support and boost the results of other oral joint supplements, such as Glucosamine and Chondroitin Sulfate.

SU-PER[®] Hyaluronic is available in powder or liquid, allowing you to choose the method of feeding that is best your horse.
