SU-PER[®] Kreatine

Supports Normal Recovery Time After Strenuous Activity!

Helps maintain proper body composition. Kre-Alkalyn is a patented, concentrated, more stable form of Creatine.

SU-PER[®] Kreatine is a creatine supplement which featuring Kre-Alkalyn: a patented, buffered, stable form of creatine. Creatine is well known by human athletes, and offers similar benefits for horses, including support for normal energy production, stamina and endurance. However, Kre-Alkalyn has some very important benefits over normal Creatine Monohydrate supplements.

Creatine Monohydrate is the most popular form of Creatine out there, and horse supplements that include Creatine are usually this type. However, this is often a poor choice for use in an equine diet. That is because

Creatine Monohydrate quickly degrades when exposed to moisture, so if you are feeding your Creatine supplement in a wet feed of any type, the Creatine is already losing it's benefits before the horse can ingest it.

Another drawback of common Creatine Monohydrate is that it causes muscle to retain significant amounts of water. If you want your horse to simply look muscular for a show or sale, Creatine Monohydrate may do the trick. But in terms of performance, you are making your horse unnecessarily heavy through muscular water retention, as well as increasing the possibility of dehydration during intense training or exercise.

Creatine Monohydrate is also known to cause stomach pain, muscle cramps, nausea and diarrhea when given in high amounts, and horses generally need a significant amount to see benefits. There are many reasons to avoid Creatine Monohydrate for your horse, but a safe Creatine source like Kre-Alkalyn is an excellent alternative.

Kre-Alkalyn is, in every way, a superior form of Creatine. It reduces the risk of stomach cramps, diarrhea and bloating that may be experienced with Creatine Monohydrate. Kre-Alkalyn also reduces the conversion of Creatine into the potentially harmful substance, Creatinine. And as mentioned above, Kre-Alkalyn does not cause the same level of water retention in the muscle tissue that normal Creatine does, meaning your horse is not carrying extra, unnecessary water weight during competition.

SU-PER[®] Kreatine works to increase energy, stamina and endurance without the nasty side effects of Creatine Monohydrate.

SU-PER[®] Kreatine will not give the same type of water retention that is desired by some owners for their show/sale horses to look larger. For show and sale horses, we recommend our **SU-PER[®] Muscle Builder** to help promote true lean muscle growth.
