

SU-PER[®] Potassium Chloride

Excellent Source of Electrolytes!

Helps maintain normal electrolyte balance.

SU-PER[®] Potassium Chloride is used as an electrolyte replacement and aids in the prevention and treatment of low Potassium levels in the blood. Potassium Chloride maintains water balance in the blood and is necessary for electrical activity in nerve and muscle cells.

Electrolytes are minerals that occur in your horse's body in a charged form and are essential to the functioning of many physiological systems. In training and heavy competition it is important to maintain or replenish five particular minerals essential to neuro-muscular function that are lost in sweat:
Sodium, Potassium, Chloride, Calcium and Magnesium.

Your horse needs around 45grams daily of Potassium at rest, this is easily met in a balanced diet with adequate grass and/or hay. However, during competition or heavy training when the horse does not have time to consume adequate roughage, your horse may experience a Potassium deficiency. *SU-PER[®] Potassium Chloride* can help correct such Potassium deficiencies.

SU-PER[®] Potassium Chloride can also be used to correct cases of hypokalemia in horses. This condition is a Potassium deficiency caused by prolonged bouts of diarrhea or horses with choke, who are unable to properly eat or hydrate for a given amount of time.

SU-PER[®] Potassium Chloride is a good choice for horse owners who provide top dressed or free choice salt, but need to add Potassium as well to keep electrolytes in balance.

Potassium Chloride is a natural mineral that is mined from the earth from various locations around the USA. Because of this, the color and texture may vary slightly.

This is a feed grade product, is 100% Potassium Chloride, and has the same nutritional value from batch to batch.
