SU-PER[®] Pro-Maxx

Probiotic Digestive Aid and Nutrient Maximizer!

PRObiotic MAXXimizer! Probiotics are the beneficial microorganisms and enzymes that efficiently and effectively aid the digestion and utilization of the nutrients in an animals diet.

SU-PER[®] Pro-Maxx is our proprietary blend of probiotics. It contains multiple strains of microorganisms, specifically formulated for horses to balance the healthy bacteria in the digestive tract. It is relatively inexpensive to feed daily - for pennies a day you can maintain proper digestive health of your horse.

Probiotics are beneficial microorganisms help to create a proper balance of healthy bacteria in the digestive tract. These “good” bacteria help to increase digestive efficiency and nutrient absorption.

The digestive tract relies on healthy bacteria for proper digestion. When a horse is in their preferred natural environment - out on pasture with a variety of forage available, living relatively stress free, and not in need of antibiotics or other medications - the body does a very good job of maintaining its own proper intestinal bacteria balance. Unfortunately, very few domesticated horses these days live in the perfect environment for optimal digestive health.

Many outside influences disrupt proper equine digestion, such as stress from travel, training, being confined in a stall or barn, a change in feed or high amounts of grain or concentrates in the diet, advanced age or illness, and more. Anytime the “good” bacteria are thinned out like this, the opportunistic “bad” bacteria quickly reproduce to fill the void. These bad bacteria can be responsible for all sorts of gastric disturbances and severely compromised digestion.

Even if you are feeding a properly balanced diet to your horse, it doesn't do a lot of good if the horse cannot utilize the nutrients you provide. Needless to say, poor digestion can contribute to all sorts of negative health problems, and prolong or worsen any existing conditions.

SU-PER[®] Pro-Maxx can help boost the beneficial bacteria in the digestive tract, and help maintain proper gut health and microbial balance.
