

SU-PER[®] Tie Deny

Supports Proper Muscle Function!

Training and performance support for exercising muscle.

SU-PER[®] Tie Deny is specifically formulated to address tying-up. It works by buffering the bloodstream of the horse so that when lactic acid is produced during exercise, it is quickly eliminated. It also increases energy stores in the muscle tissues themselves, and prompts the body to use fat as a source of energy, which lessens the overall production of lactic acid.

When a horse works too hard during training or competition, sometimes the muscles along the back and rump will contract and not relax. In serious cases, it looks as if the horse is nailed to the ground, unable to move. It can range in severity from minor muscle cramping to debilitating, completely contracted muscles. In cases of exercise-induced cramping (tying-up), the culprit in almost every instance is rapid lactic acid buildup.

In addition to managing lactic acid production and elimination, *SU-PER[®] Tie Deny* helps support normal circulation during exercise and oxygen uptake in the bloodstream, and helps to ensure oxygen delivery to muscles and help filter toxins created by burning energy.

It also contains B-complex vitamins to help with energy production, delaying fatigue, and increasing the time in which the horse can perform at peak levels before lactic acid production kicks in.

SU-PER[®] Tie Deny is available in paste or powder form. Paste is designed to be administered in the hours leading up to competition, and the powder form is a daily supplement that can be used to maintain and prepare muscle energy stores and neutralize lactic acid buildup throughout the competition season. We recommend the paste before training/competition for any horse with cramping issues, and adding the powder daily for moderate to severe cases.
