

SU-PER[®] suBstitUTE

Supports Normal Joint Mobility!

Recommended to support and maintain healthy joint function.

SU-PER[®] suBstitUTE is a proprietary blend of Devil's Claw, MSM, Yucca Extract, Salix Alba (Willow Bark), and several other herbal extracts. It is designed to give the most complete natural anti-inflammatory support available from a drug-free source.

Bute (phenylbutazone) is a highly effective anti-inflammatory and analgesic commonly used in joint swelling and pain, but studies show that Bute can contribute to gastric ulcers and other intestinal problems. This is definitely a concern in performance horses and those under stress of injury or illness, as these horses are more prone to ulcers in general. And even more alarming is that Bute has been shown to interfere with normal joint repair - basically denying the joint a chance to heal. While you may give Bute to help with pain short term, you are essentially prolonging your horse's joint issues.

Rather than feeding Bute, we recommend *SU-PER[®] suBstitUTE* as a natural alternative.

Devil's Claw supplements like this one have been used for many years, but have none of the negative side effects of Bute. *SU-PER[®] suBstitUTE* combines the optimum dosage of both Devil's Claw and MSM, another powerful nutrient for maintaining joint health and relieving discomfort. It also contains Salix Alba (Willow Bark), Yucca, and Grape Seed Extract, to assist in normal inflammatory responses and maintain proper circulation to the joints.

The only potential side effect associated with feeding Devil's Claw is that was suggested in one study that it may cause uterine contractions in pregnant women. Therefore out of caution, we do not recommend it for use in pregnant mares. It is also not recommended for horses with a history of gastric ulcers. For all other horses, regardless of age or discipline, *SU-PER[®] suBstitUTE* is your best choice in aiding the fight against joint stiffness and discomfort.
